

CSCI 3731 C++ Homework 1

Push a preliminary version to Github before Wednesday's class.

Push final version to Github before 5PM Friday.

1. Read chapters 1 – 3 in the text.
2. Install the C++ tool chain for your platform. Create a github repository for this class and email me the URL at drpierhpu@gmail.com before Wednesday's class. Create a new "hw01", etc. directory in your repository for each homework.
3. For this week, write a C++ program that is more interesting or useful than "Hello World". Create a makefile for your program. Add your source code, including header files and makefile in the repository, but not any of the compiled files.
